Modernize your infrastructure

Move your legacy infrastructure to a flexible hybrid environment and accelerate development with an open platform.

- Speed innovation with tools and services in Azure, and gain actionable insights with data collected from connected devices.
- Protect your citizens' data with advanced security and compliance standards that exceed United States government regulatory requirements.
- Improve citizen experiences across all your services—whether your apps are in the cloud or on premises.

Get threat protection and the broadest coverage for compliance

Depend on datacenters and cloud services that meet or exceed the critical requirements needed for your agency's workloads. And, as regulations change, your compliance coverage will keep pace with their evolution. In addition, Azure Government offers [datacenters](#) with round-the-clock monitoring, operated by screened US citizens. All data, app, and hardware residency remain in the continental United States. Encrypt your keys and secrets in validated hardware security modules.

See what customers are doing with Azure Government

"The VA is actively embracing digital government and taking things to a whole new level. Through the power of cloud technology, we are able to take information of great importance to Veterans and our stakeholders, such as the Access to Care website, and make it directly available to our constituents. The Access to Care site is an example of the new types of tools the VA will be pursuing that will foster transparency and empower the Veteran and our constituents to help them understand how the VA as a whole is doing and their local VA as well when it comes to access and quality of care."

Jack Bates, Director, OI&T Business Intelligence Service Line, Veterans Affairs
